Bulk Copy Alerts –
Prevent Data Theft Before It Happens

Protect Your Sensitive Data – Stop Unauthorized Bulk File Transfers

Your business data is valuable. Don't let it walk out the door. Our **Bulk Copy Alerts** feature notifies you when large amounts of files are being copied—so you can stop data theft before it happens.

Why Your Business Needs Bulk Copy Protection

Normal File Use **Vs** Suspicious Bulk Copying

Insider threats, departing employees, or cybercriminals can attempt to copy **hundreds of files at once** onto external drives or cloud services. Standard security tools may not detect this activity until it's too late.
Our Bulk Copy Alerts, powered by FileSure, **monitors file transfers in real time**. If a user copies an unusually large number of files within a short period, our system immediately alerts IT so they can investigate or block the transfer.
How It Works

Real-Time Monitoring
- Watches for suspicious bulk copying of business-critical files.
- Detects transfers to USB drives, cloud storage, and network shares.

Instant Alerts & Action
- Sends an alert when 100+ files are copied within an hour.
- Enables IT teams to intervene before data is stolen.

Protection Against Insider Threats
- Catches employees taking sensitive files before leaving the company.
- Helps ensure compliance with data security policies.

The Business Impact

- **Prevent Data Leaks** – Stop unauthorized copying before sensitive files are lost.
- **Detect Insider Threats** – Identify risky behavior from employees or contractors.
- **Ensure Compliance** – Maintain security standards for industry regulations.

Why Choose Our Managed Security?

- **Proactive Data Protection** – We **detect and respond** to threats before damage occurs.
- **Real-Time Alerts** – Immediate notification allows quick action.
- **No Performance Impact** – Monitors file activity without slowing down your network.
