

Prove Compliance. Prevent Data Breaches. Protect Your Reputation.

The Problem

Regulatory compliance requires strict security and **proof** that your company protects sensitive data. But manually tracking file access and security incidents is time-consuming and unreliable.

- Auditors asking for proof of data security policies
- No clear record of who accessed or modified sensitive files
- Uncertainty if employees or vendors are following compliance rules

FileSure provides automatic, real-time file activity logging to simplify compliance and security.

How It Works

Track file access

Log every time sensitive files are read, modified, or deleted

Generate audit reports instantly

Show compliance with HIPAA, PCI-DSS, SOX, and more

Receive security alerts

Detect and respond to unauthorized access attempts

Keep logs tamper-proof

Ensure integrity of records for audits and investigations

The Benefit to Your Business

- Simplify Compliance – Automatically meet regulatory requirements
- Save Time & Effort – No manual tracking, no last-minute audit stress
- Enhance Security – Proactively detect threats before they escalate

With FileSure, compliance is built-in—so you can focus on running your business.
